

130 Series Reversing Control for PM and Shunt Wound DC Motors through 2 HP

INSTANT REVERSING, QUICK STOPPING, RAPID CYCLING...

The 130 Series reversing control outperforms other dynamic braking and reversing controls by utilizing Dart's unique zero-speed detect and dynamic braking circuits. These circuits eliminate the contact arcing and failed braking problems associated with other reversing and dynamic braking controls. Dart's zero speed detect circuit also eliminates motor plug reversing problems.

In the event of a power loss or emergency stop condition, the 130 Series control will drop into a dynamic brake condition to safely and quickly bring the motor to a stop and remain there until power is reapplied and a run condition is recognized.
