

GEARWRENCH® Pliers

GearWrench® offers a broad range of pliers to meet the needs of most industrial applications. Ergonomic design, quality materials and precision assembly produce a tool that will get the job done for years to come.

GearWrench® delivers innovation with the Double-X, double joint pliers that allow the plier to reach where others can't. The two pivot points act to allow the jaws to open greater than the handles that means better access to more places. They are constructed of corrosion resistant alloy steel for long life and have dual-dipped grips for user comfort.
